

W05-P1: use JavaScript module to import and export

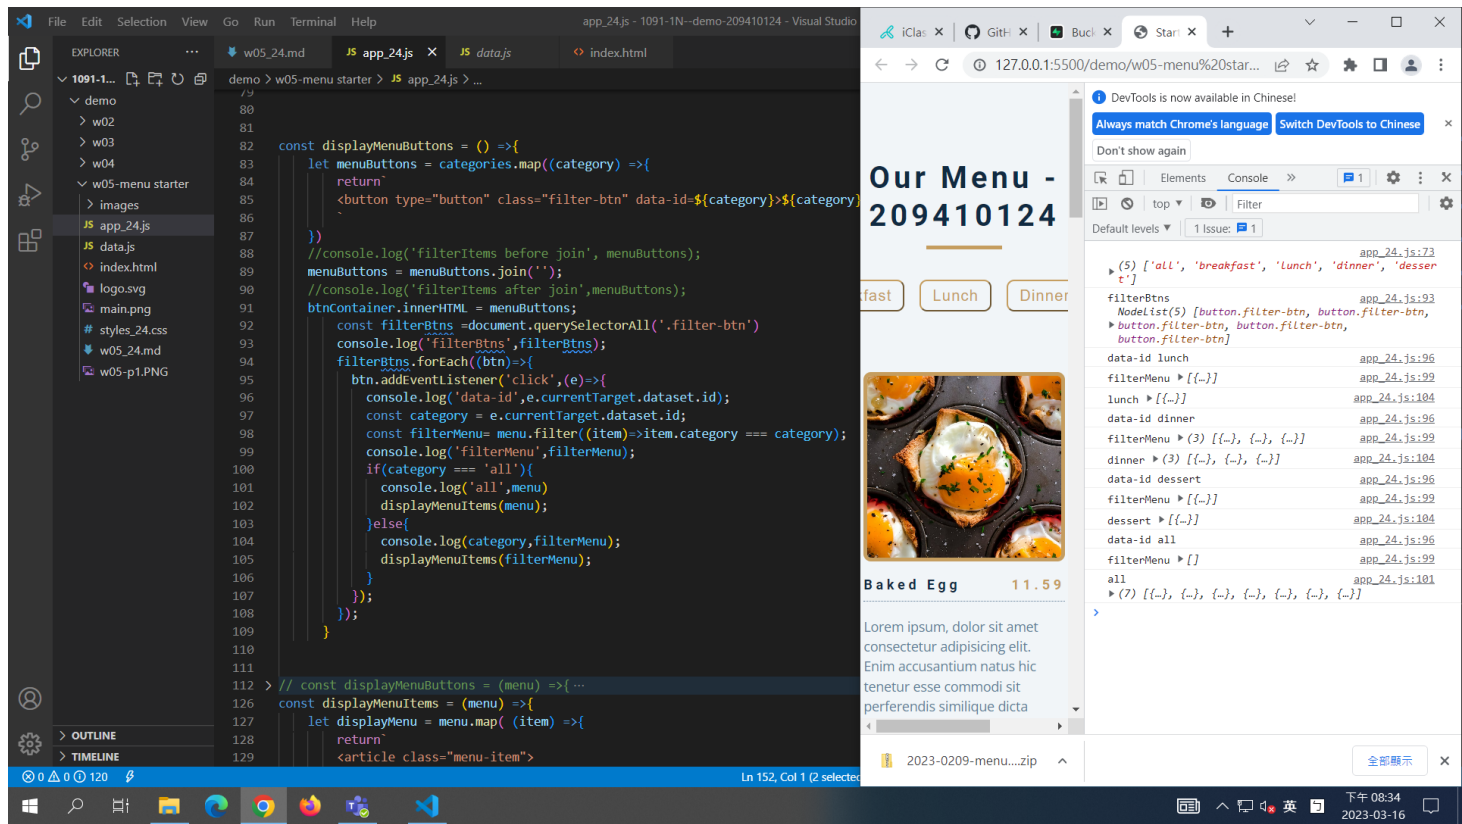

The screenshot shows the Visual Studio Code editor with three files open: `index.html`, `app_24.js`, and `data.js`. The `index.html` file contains an HTML structure with a `<script type="module" src="app_24.js"></script>` tag. The `app_24.js` file imports a `menu` module from `./data.js`. The `data.js` file exports a `menu` array containing four food items.
